

Team Contributions and AI Disclosure

Project: RoomRadar QC

Purpose

This document explains each team member’s responsibilities and discloses how AI support tools were used during the project.

1. Team Members and Responsibilities

Team Member	Main Role	Responsibilities
Kyrilous	Frontend Developer	Built the React/Vite frontend, including the Home page, Find Rooms page, building dropdown, room search form, room result cards, RoomDetails page, routing, UI styling, frontend validation, time formatting, and frontend API integration.
Darshan	Backend Developer	Worked on the Flask backend, MySQL connection, database models, API routes, CSV upload handling, room search logic, room schedule endpoint, and schedule data processing.
Joseph	QA / Reviewer	Reviewed completed tickets, tested features, checked user workflows, reviewed application behavior, and helped verify functionality before tasks were moved to complete.

2. AI Disclosure

AI support tools were used during the project as a development aid. When the team was stuck on an issue, we used AI to help explain errors, suggest possible solutions, and clarify setup or debugging steps. Any AI-assisted suggestions were reviewed, tested, and modified by the team before being included in the final project.

The project code, testing, final decisions, and submitted deliverables were completed and reviewed by the team.

3. Contribution Summary

Team Member	Contribution Summary
Kyrilous	Completed the frontend implementation and contributed to project documentation, including requirements, test plan, deployment guide, known limitations, database documentation, scrum log, and final deliverable organization.
Darshan	Completed backend implementation and database-related functionality, including Flask routes, MySQL table structure, schedule data handling, CSV upload handling, and API logic. Also contributed to backend documentation by explaining database setup, API behavior, backend configuration, and the schedule upload workflow.
Joseph	Reviewed completed work, tested features, represented the group during class discussion, and helped verify project functionality. Also contributed to documentation review by checking deliverable requirements, helping identify missing sections, and supporting the final organization of testing and project management materials.

4. Detailed Work Breakdown

4.1 Kyrilous

Kyrilous worked primarily on the frontend portion of RoomRadar QC.

Main contributions included:

- Built the React/Vite frontend structure.
- Created the Home page.
- Created the Find Rooms page.
- Added day, time, and building search controls.
- Added building name and building code mapping.
- Built the room result card layout.
- Added the View Room Schedule button.
- Created and connected the RoomDetails page.
- Connected frontend pages to backend API endpoints.
- Added frontend validation for missing fields and invalid time ranges.
- Added time formatting for schedule display.
- Added full building names instead of only building codes.
- Added weekend search options.

- Added user-facing error handling.
- Added the room availability disclaimer.
- Helped organize and draft final project documentation.

4.2 Darshan

Darshan worked primarily on the backend and database portion of RoomRadar QC.

Main contributions included:

- Set up Flask backend functionality.
- Worked on MySQL database connection and configuration.
- Created and maintained backend data models.
- Created backend API routes.
- Implemented room search logic.
- Implemented schedule lookup logic.
- Worked on CSV upload handling.
- Processed uploaded semester schedule data.
- Helped prevent duplicate room records during CSV upload.
- Worked on day and time handling for schedule searches.
- Supported backend filtering for buildings and physical room locations.
- Contributed backend-related information for documentation, including database setup, API behavior, and upload workflow.

4.3 Joseph

Joseph worked primarily on quality assurance, review, and project verification.

Main contributions included:

- Reviewed completed Jira tickets.
 - Tested completed frontend and backend features.
 - Checked the room search workflow.
 - Checked room schedule behavior.
 - Reviewed admin access behavior.
 - Helped verify whether features met project requirements.
 - Represented the group during class discussion.
 - Helped identify missing final deliverable sections.
 - Helped review the organization of testing and project management materials.
 - Provided feedback before tickets were moved to complete.
-

5. Review Workflow

The team used a review workflow where tickets moved through development, review, and completion.

Typical workflow:

1. A task was assigned to the team member responsible for implementation.
2. The assigned team member completed the work.
3. The ticket was moved to **In Review**.
4. The ticket was assigned to Joseph for review/testing.
5. After review, the ticket was moved to complete.

6. Documentation Contributions

The team also contributed to final deliverable documentation.

Document / Area	Main Contributor(s)	Notes
Requirements and Specification	Kyrilous	Drafted and organized requirements into testable functional and non-functional requirements.
Test Plan and Traceability Matrix	Kyrilous, Joseph	Kyrilous drafted the test plan; Joseph supported review of test coverage and deliverable organization.
Scrum Log	Kyrilous, Joseph	Kyrilous drafted the sprint log; Joseph supported project management review and ticket verification.
Deployment Guide	Kyrilous, Darshan	Kyrilous drafted the guide; Darshan contributed backend setup, database, and API configuration details.
Database Schema and SQL Setup	Darshan, Kyrilous	Darshan contributed backend/database structure; Kyrilous organized the information into the deliverable format.
Software Limitations	Joseph	Documented known system limitations and future improvement areas.

7. Honor Statement

We certify that the submitted project represents our team’s work. Any AI support tools used during the project have been disclosed, and all final code and documentation were reviewed and accepted by the team before submission.
